## General

Identifier doi:10.18739/A2X921J1G

Abstract This dataset is comprised of physical and chemical stratigraphic records from firn cores collected on the western flank of the Greenland Ice Sheet, and ice caps on Disko Island, Greenland and the Nuussuaq Peninsula, Greenland. These cores were collected in support of the NICE project Collaborative Research Investigating the Influence of Sea surface

### Metadata Quality Report

After running your metadata against our standard set of metadata, data, and congruency checks, we have found the following potential addressing the issues below:

26 checks

Identification: 100% complete

Discovery: 100% complete

Interpretation: 100% complete

Passed 18 checks out of 18 (informational checks not included).

Warning for 0 checks.

Failed 0 checks.

8 informational checks.

# Dataset Highlights

## Dataset Highlight: Phenological Mismatch in the Arctic, with Dr. Kathy Kelsey

By Kathryn Meyer

**Citation:** Katharine Kelsey. 2017. Methane and nitrous oxide fluxes as a function of the timing of goose grazing, Yukon Kuskokwim Delta, Alaska, 2016. Arctic Data Center. doi:10.18739/A28J6F.

**Highlight:** "These data are critical for understanding how climate-induced changes in the timing of migratory herbivore grazing should be included in projections of the role of Arctic and Subarctic ecosystems in the global climate system," – Dr. Kathy Kelsey.

Phenological mismatch is when the timing of food and/or habitat availability for a species is altered relative to that which that species is accustomed. It's also a phenomenon becoming more prevalent in a changing climate. As climatic changes lead to an earlier spring in the Arctic and many other parts of the world, the timing of herbivore migration and grazing is also changing. Dr. Kathy Kelsey, a Postdoctoral Fellow at the University of Alaska, Anchorage, and her team led by Principal Investigators Dr. Karen Beard, Dr. Jeffrey Welker and Dr. Joshua Leffler, know this well.

Dr. Kathy Kelsey collecting greenhouse gas data. PC: Ryan T. Chai

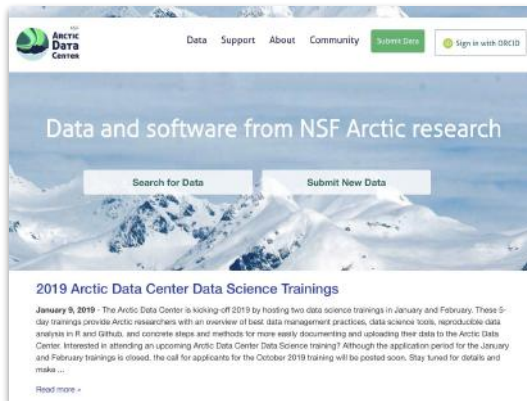

But while phenological mismatch is known to have effects on herbivore populations, Kelsey and her team are specifically investigating how these timing changes affect interactions between the biosphere and the atmosphere. To do this, they collected data on the exchange of greenhouse gases, including carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O), between the ecosystem and the atmosphere. This particular dataset helps to understand how changes in the timing of the growing season and the timing of goose grazing affect greenhouse gas fluxes.

Addressing their research questions really is a team effort. To collect and analyze their own data, Kelsey's team relied on other available data – including data on geese arrival,

## Highlighting the Stories and People Behind Preserved Arctic Data

The Arctic Data Center has recently established a Dataset Highlights page. The Dataset Highlights page provides insights directly from the researchers, including how their data might be applied to other questions in support of Arctic research. The six datasets highlighted here are from studies of Arctic soil bacteria, Arctic river geochemistry, Indigenous subsistence harvest, local community response to ecosystem change in the Bering Sea, the habitability of fragile rotten ice, and phenological mismatch in the Arctic.

By: Kathryn Meyer, Community Engagement and Outreach Coordinator at the Arctic Data Center

# the **Arctic Data Center,** **NSF Standards & Policies**

# Who Must Submit

<https://arcticdata.io/submit/#who-must-submit>

## **Arctic Research Opportunities (ARC):**

- Complete metadata and all appropriate data and derived products
- Within 2 years of collection or before end of award, whichever comes first

## **ARC Arctic Observing Network:**

- Complete metadata and all data
- Real-time data made public immediately
- Within 6 months of collection

# Who Must Submit: Social Sciences

<https://arcticdata.io/submit/#who-must-submit>

## Arctic Social Sciences Program (ASSP):

- NSF policies include special exceptions for ASSP and other awards that contain sensitive data
- Human subjects, governed by an Institutional Review Board, ethically or legally sensitive, at risk of decontextualization
- Metadata record that documents non-sensitive aspects of the project and data
  - *Title, Contact information, Abstract, Methods*

# Terms of Use: Licensing and Distribution

<https://arcticdata.io/submit/#license-and-data-distribution>

All metadata and (non-sensitive) data will be released under either:

CC-0 Public Domain Dedication:

*“...can copy, modify, distribute and perform the work, even for commercial purposes, all without asking permission.”*

Creative Commons Attribution 4.0 International License:

*“...free to...copy,...redistribute,...remix, transform, and build upon the material for any purpose, even commercially,...[but] **must give appropriate credit**, provide a link to the license, and indicate if changes were made.”*
